

### Available Research Residencies - 2007-08 Academic Year

According to the 2006-2007 School of Nursing Faculty and Student Handbooks, before the Qualifying Examination, doctoral students are expected to take two quarters of **Research Residency** for a total of six units (including one which focuses on data analysis using an existing data set).

The course is:

**276. Research Rotation.** (1-6 units) § Fall, Winter, Spring, SS1, SS2, SS3.

*Prerequisites:* Completion of first year of doctoral study and consent of adviser. Laboratory 3 - 18 hours. **Staff**

The student will participate in ongoing faculty research. This experience will contribute to the student's methodological or substantive expertise.

Below is a table of available research residencies to assist doctoral students and their advisors to identify potentially relevant research experiences. The list is not all inclusive as faculty members who already have their residency slots filled may not be listed.

Below are examples of types of research activities within the broad categories A to K.

**A. Developing a Research Question and Plan:** e.g. team meetings/planning for collaboration, conceptual discussions of research ideas and frameworks, selection of data collection methods, learning to negotiate and document ownership of an aspect of a project.

**B. Writing a Research Proposal:** e.g. writing research proposals which may include becoming familiar with agency requirements, learning about UCSF Contracts and Grants requirements, writing various parts of the proposal, putting together various parts of a proposal, preparing a budget and budget justification, contacting participating agencies.

**C. Preparing an IRB Application:** e.g. discussion of ethical treatment of research subjects (human, animal, special populations, vulnerable populations), discussion of health disparities, writing a consent form, revising an IRB application, monitoring adverse events, learning about Data Safety Monitoring Plans and Boards, learning about NIH Clinical Trial categories.

**D. Preparing for the Conduct of Research:** e.g. selection and/or development of instruments/questionnaires, obtaining informed consent, developing community or site relationships, orienting data collection sites to the project, pilot testing of data collection methods, learning the regulations of human, animal or laboratory research.

**E. Data Coding and Preparation – Quantitative Data Management:** e.g. coding, data entry, preparing a utilizing a spreadsheet for managing data, preparing an SPSS database, learning about HIPAA and other Federal regulations regarding the proper handling, storage, and securing of data.

**F. Data Coding and Preparation – Qualitative Data Management:** e.g. coding of transcripts, utilizing computer-based programs for management of

**CHS:** Department of Community Health Systems; **FHCN:** Department of Family Health Care Nursing; **PN:** Department of Physiological Nursing;

**SBS:** Department of Social and Behavioral Sciences; **IHA:** Institute for Health and Aging

qualitative data, learning about HIPAA and other Federal regulations regarding the proper handling, storage, and securing of data.

**G. Conducting Human Research:** e.g. learning about appropriate ways to approach and accrue subjects, learning strategies for accruing subjects from minority populations, consenting subjects, interviewing subjects, collecting physiological data, monitoring the integrity of the project, learning to keep tabs on the various aspects of a project, keeping research notes, keeping instrument or coding changes up-to-date, handling psychosocial testing of subjects, providing feedback to research team members, learning how to respond in emergency situations, learning to report adverse events, learning to remain objective and not intervene.

**H. Conducting Animal/Laboratory/Archival/Other Nonhuman Research:** e.g. learning how to care for animals, learning appropriate laboratory techniques, monitoring the integrity of the project, learning to keep tabs on the various aspects of a project, keeping research notes, keeping instrument or coding changes up-to-date, collecting data, providing feedback to research team members, learning how to respond in emergency situations.

**I. Analyzing Data:** e.g. cleaning and checking the data, performing computerized analyses, participating in team meetings about data analysis and interpretation, preparing tables and figures, writing-up the analyses.

**J. Publishing and Disseminating Research:** e.g. negotiating authorship/journal selection/conference selection, writing reports, preparing poster and slide-type presentations, writing manuscripts.

**K. Planning for Future Research:** e.g. planning a program of research, negotiating and documenting future collaboration.

**RESEARCH RESIDENCIES 2007-08, UCSF SCHOOL OF NURSING**
